

README

This folder contains the files used to generate the figures and tables for the term paper.

Before running the scripts, please make sure to update the file paths in the code so that they match the locations of the relevant input files on your own computer. Once the paths have been correctly modified, you can reproduce all tables and figures by running the alltable.do

All generated output files, including the final figures and tables, will be saved in the corresponding output or table folder.

File descriptions:

- MarginalEffect_vs_Weight_Plot_NoCI_Flat.png
This file corresponds to Figure 1: “Estimated Marginal Effect of Full-Name Fluency on Academia Placement under 101 Alternative Weighting Schemes.” It shows the estimated marginal effects under alternative weighting schemes for the full-name fluency score.
- Internal_Meta_Analysis.doc
- Internal_Meta_Analysis.txt
- Internal_Meta_Analysis.xls
These files are used to generate Table 1: “Internal Meta-Regression of Marginal Effects on Alternative Name Weighting Schemes.” Table 1 reports the internal meta-regression results for the sensitivity analysis.
- Table2_probit.tex
- Table2_probit.txt
- Table2_tobit.tex
- Table2_tobit.txt
These files are used to generate Table 2: “Name Fluency and Placement Outcomes by Top 5 Editor Status of Advisors.” Table 2 presents the subgroup regression results based on whether the advisor has served as a top 5 journal editor.
- Table3_probit.tex
- Table3_probit.txt
- Table3_tobit.tex
- Table3_tobit.txt
These files are used to generate Table 3: “Name Fluency and Placement Outcomes by Top 5 Publication of Advisors.” Table 3 presents the subgroup regression results based on whether the advisor has any top 5 journal publications.
-

Additional notes:

- Figure 1 corresponds to the sensitivity analysis of alternative weighting schemes for first-name and last-name fluency scores.
- Table 1 corresponds to the internal meta-analysis of the estimated marginal effects.
- Table 2 corresponds to the heterogeneity analysis by top 5 editor status of advisors.
- Table 3 corresponds to the heterogeneity analysis by top 5 publication status of advisors.

If the paths are set correctly, all figures and tables should be reproduced automatically without any further manual adjustment.
